

AI FAQ ASSISTANT API

- **Project Title:** "Ai Faq Assistant Api"
- **Team ID:** NM2025TMID38548
- **Team Leader:** M. Divya sree
- **Team Members:**
 - NAME: M.Anusree
 - NAME: N.Deepika
 - NAME: M.Dhivya sree
 - NAME: A.Ambeeleswari

PROJECT DOCUMENTATION PHASE

The Project Documentation Phase focuses on preparing complete and organized documentation for the **AI FAQ Assistant API**. The documentation explains the purpose, features, architecture, working process, API endpoints, technologies used, and system requirements of the project. It helps developers, users, and future team members understand how the system works and how it can be maintained or improved.

1. Project Overview

The **AI FAQ Assistant API** is a backend-based application designed to provide automated answers to frequently asked questions. It uses API services to receive user questions, process them, and return suitable answers. The system reduces manual effort and provides quick access to frequently required information.

2. Functional Documentation

The documentation describes the major functions of the system, such as:

- Receiving user questions through API requests.
- Processing and identifying frequently asked questions.
- Generating or retrieving relevant answers.
- Managing FAQ data.
- Returning responses in a structured format.
- Handling invalid requests and errors.

3. Technical Documentation

The technical section includes the technologies and tools used to develop the project, such as **Node.js, Express.js, Mongo DB, JavaScript, REST API, and VS Code**. It also explains the project structure, database design, server configuration, and communication between the client, server, and database.

4. API Documentation

The API documentation provides details about the available endpoints, request methods, parameters, and responses. Example endpoints include:

- **FAQ:** /api/faq/create, /api/faq/:id
- **Question:** /api/faq/ask
- **User:** /api/user/register, /api/user/login

Each endpoint is documented with its purpose and expected input and output.

5. Installation and Usage Documentation

The documentation includes the prerequisites and steps required to install and run the project. It explains how to clone the project, install dependencies, configure the database, start the server, and access the API. Basic usage instructions are also provided for testing the API.

6. Testing and Error Handling

The documentation records the testing process performed on the API. It includes successful requests, invalid inputs, authentication errors, database errors, and other possible issues. Proper error messages and status codes are documented to make troubleshooting easier.

7. Maintenance and Future Enhancement

The documentation also provides guidelines for maintaining and updating the system. Future enhancements may include improving AI-based answer generation, adding authentication and authorization, supporting multiple languages, improving FAQ management, and integrating a user-friendly frontend.

Conclusion

The Project Documentation Phase provides a complete reference for the **AI FAQ Assistant API**. Well-structured documentation makes the project easier to understand, test, use, maintain, and extend in the future. It also ensures that the technical and functional details of the system are clearly recorded for developers and users.
